

PLEASE TAKE NOTE OF THE FOLLOWING

All animals should have the following vaccines before being accepted for Air Transportation.

- Puppies and kittens can only fly from the age of 8 weeks.
- Combination Vaccine
 - 5-in-1 for Dogs
 - 4-in-1 for Cats
- There is a waiting period of 14 days for ALL 1st time vaccinations & a 24hr waiting period for ALL booster vaccinations. This includes Rabies, 5-in-1 & 4-in-1 vaccines.
- The animal is accepted for travel within 24hrs of the booster vaccination being administered if they have a good history and the booster has not lapsed.
- Animals older than 3 months must be inoculated against Rabies, this should be done annually.
- If a customer can prove that the vaccination booklet for an animal is still valid the animal may accepted for air transport.
- An animal that is 8 weeks old but younger than 3 months would require a valid rabies vaccination booklet for the female parent, they do however, need their own updated combination vaccination (5-in-1).
- In cases where the puppies and kittens have been rescued and there is no record of the mom – The animal requires their own rabies & combination vaccination, a 14 day waiting period is applicable.
